

Taking your Kent State desktop home:

If you are taking your Kent State University desktop computer home, there are a few considerations to keep in mind.

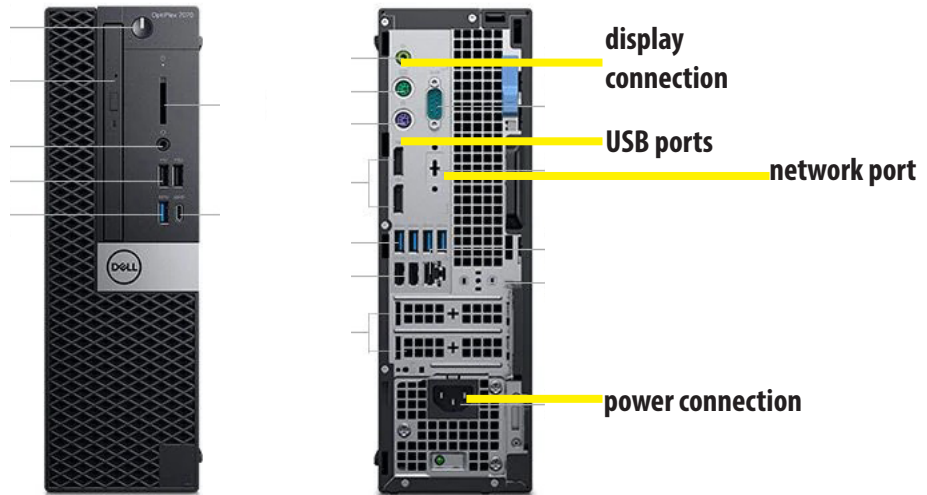

First will be letting your local support person know that the device is leaving campus. Please contact them with the following information: your name, KSU email address, desktop model and department. If you aren't sure who your local IT support is, please use this link: <https://kent.teamdynamix.com/TDClient/2005/Portal/KB/ArticleDet?ID=38062>

Second is how to reconnect your system, including keyboard, mouse, monitor and network.

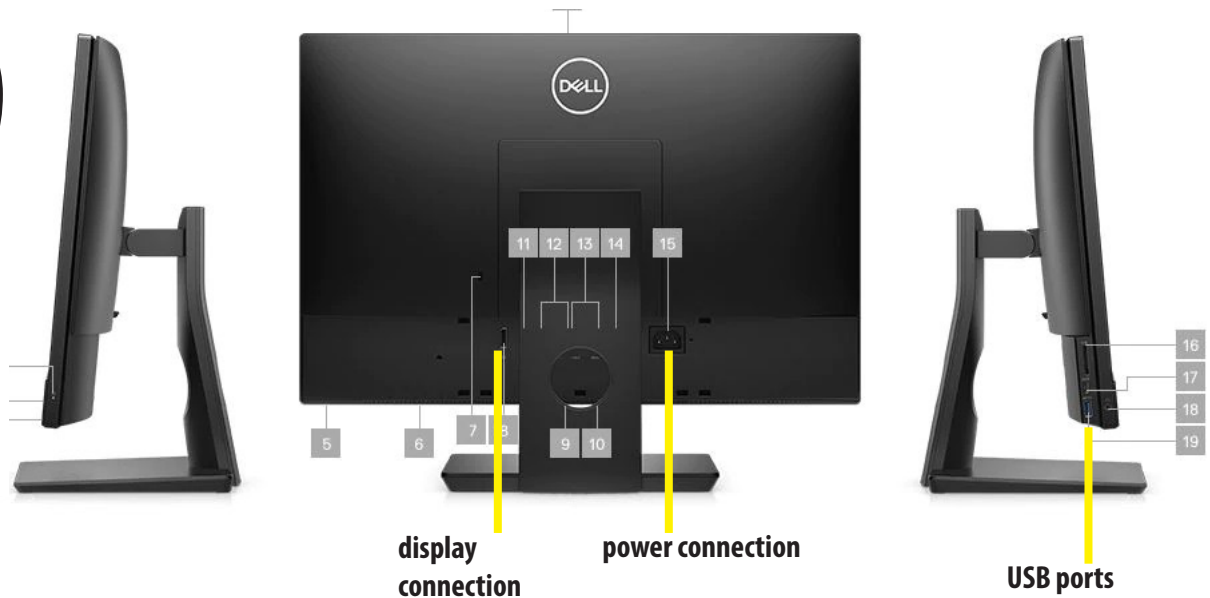

Connecting your Kent State desktop:

Please use the diagrams below to reconnect your computer. Standard desktop towers (image 1 below) will require a network cable to be plugged directly in. All-in-one devices (image 2 below) are capable of wireless or wired connectivity. Please only use one of these methods. **Note to Mac users; all Apple laptops and desktops have wireless built-in.**

1)

2)

Connecting to KSU resources:

Once your computer is connected and powered on you should be able to login as normal.

Please visit our work-from-home website, <https://www.kent.edu/keepworking>, which contains help guides and instructions for University software and processes.
