

# Using the Crestron Control System

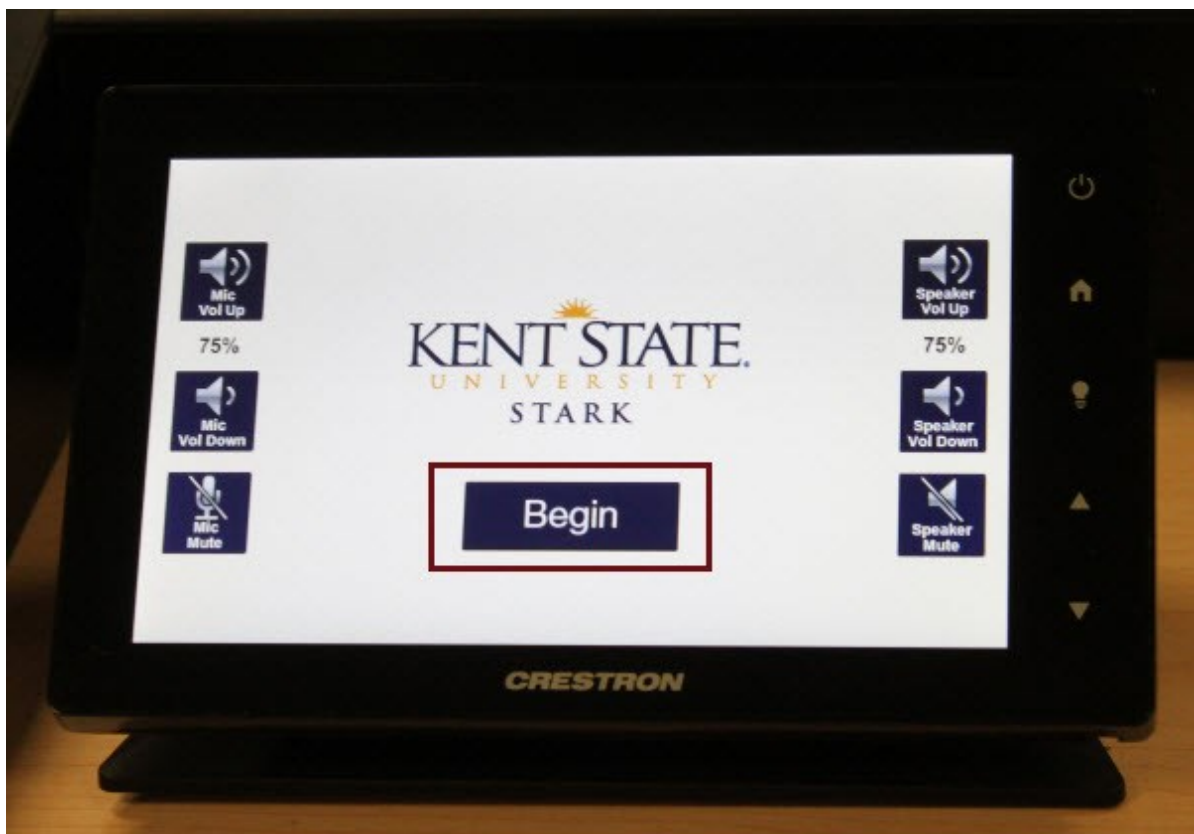

The Crestron Control System allows presenters to seamlessly connect to the projector and audio system in the classroom. Everything is controlled via a touchscreen tablet located on the instructor station.

## Powering On

If you are planning to use the instructor station computer, you can turn that on and log in.

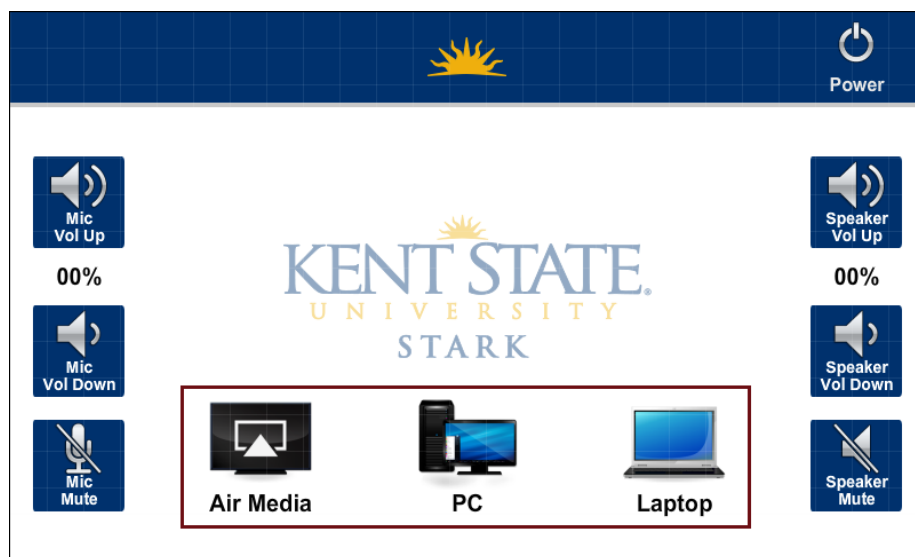

Turn the Crestron on by touching the **Power** button on the top right of the Crestron unit

On the Crestron screen, touch the **Begin** button. This will automatically turn on the projector as well.

## Selecting Your Source

On the Crestron screen, touch the name of the source you would like to present on the projector. You can project the instructor station by touching the **PC button**. You can switch to project your **Laptop** screen or the **Air Media** mobile app by touching those buttons at any time.

## Computer Audio

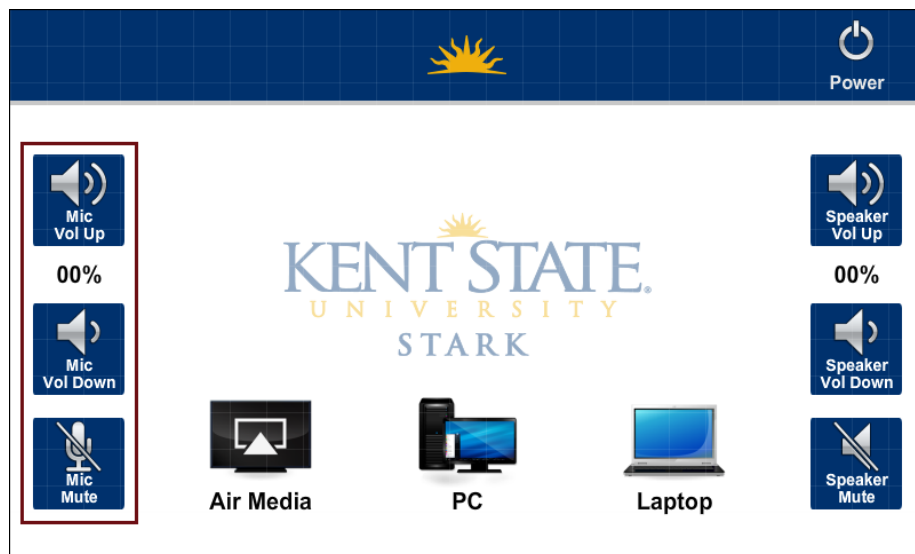

There is a built-in speaker system so you can play audio from the computer for the class. This is useful for showing online videos, DVDs, etc.

You can control the volume of the computer audio from the Crestron using the **Speaker Vol Up** and **Speaker Vol Down** buttons along the right side of the screen. You can also **mute and unmute** the speaker audio here.

## Microphone Audio

For occasions where you need to use a microphone, you can request a wireless microphone from Media Services. When you use the wireless microphone, you can control the volume with the **Mic Vol Up** and **Mic Vol Down** buttons on the left side of the Crestron screen. You can also **mute and unmute** the microphone here.

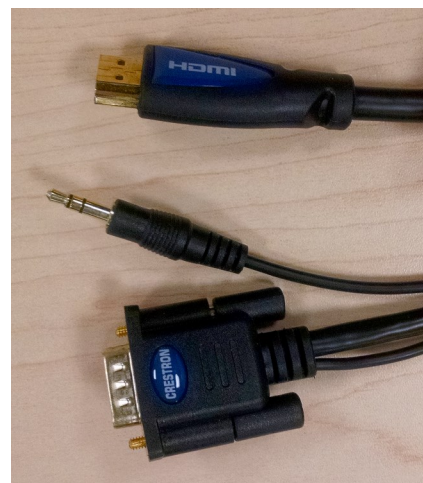

## Connecting a Laptop

You can use your own laptop with the Crestron system if desired. First, you'll need to connect your laptop using either the VGA or HDMI cable, depending on the type of port on your laptop.

Note: If you use the VGA cable, you will also need to plug in the attached audio cable if you want to use the sound system with your laptop.

VGA + Audio

Top: HDMI cable  
Bottom: VGA and audio cable

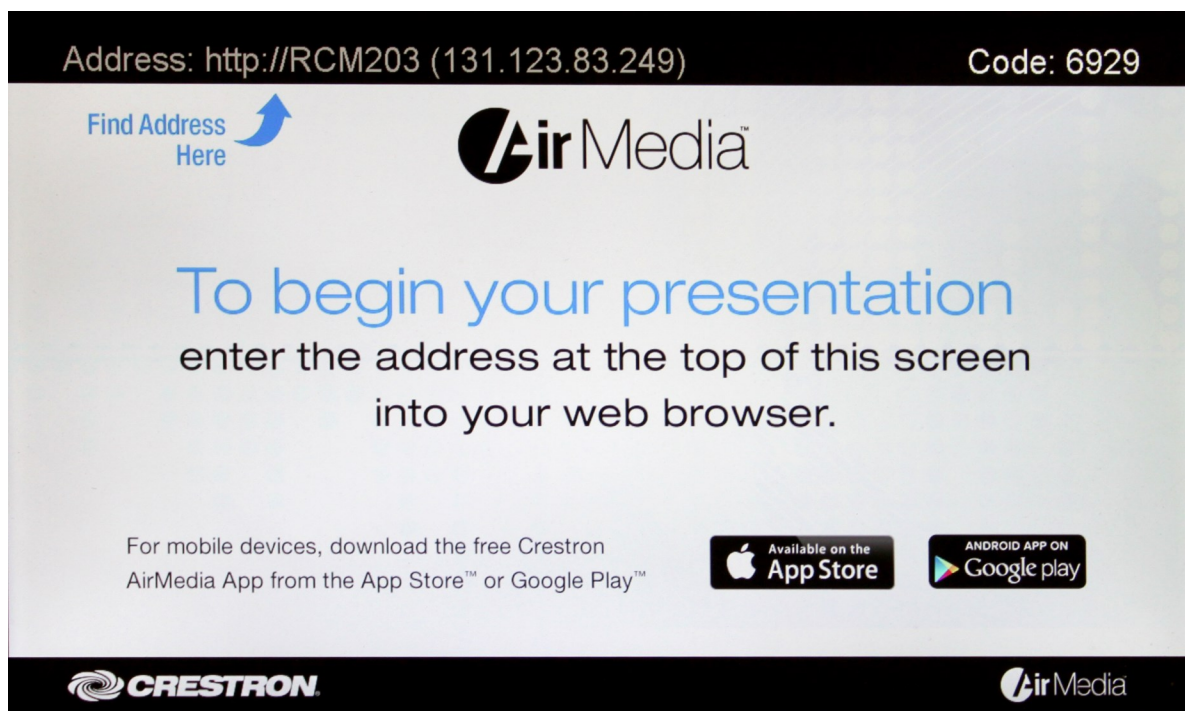

Touch the **Laptop** button on the Crestron screen to select it as the source. Your laptop image will be projected.

## Using Air Media

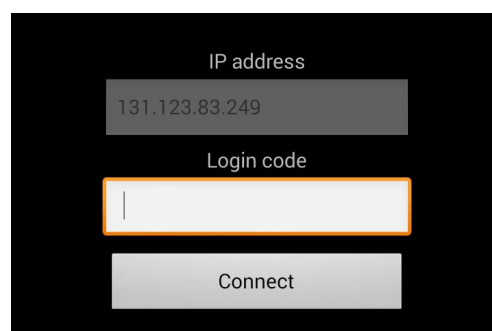

You and your students can project documents and images from mobile devices such as smart phones and tablets. In order to do this, you must download a free mobile application called Air Media, which is available for iOS and Android.

On the Crestron screen, select **Air Media** as your source.

Launch the **Air Media app** on your mobile device. It will scan for the projector and once it comes up in the list, select it. You will then enter the **Login Code** for the projector, which will be shown on the PC and projector screens.

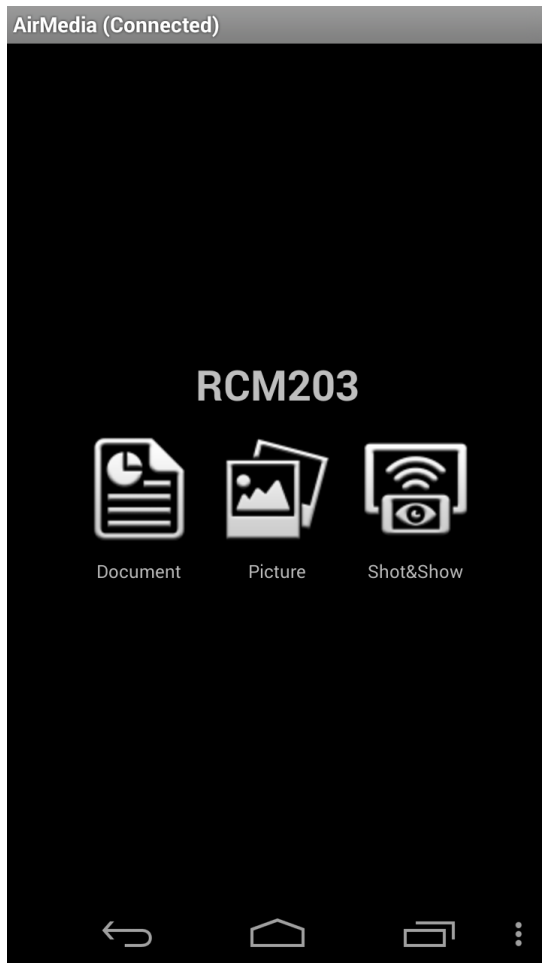

Note: The IP Address will remain static but the codes will change, so make sure to look for the current Login Code in the top right corner of the screen when connecting to the Air Media app.

## Air Media App

Once you or your students connect to the Air Media app, you can select what you would like to share: **Document**, **Picture**, or **Shot & Show**. Selecting Document or Picture will then allow you to browse for and select the file on your device. Shot & Show will show a screenshot of your current mobile device display.

## Help

If you need help with the Crestron unit, touch the **Help** button in the top left corner to see available assistance options and contact information.

## Power Down

Once you are finished presenting, touch the **Power** button and then **confirm** on screen as prompted.

This will also shut down the projector and audio system. You can then log off or shut down the computer as normal.
