

"Syndicating" your Production

RSS is a family of [Web feed](#) formats used to publish frequently updated content such as [blog](#) entries, news headlines, and [podcasts](#) in a standardized format. An RSS document (which is called a "feed", "web feed", or "channel") contains either a summary of content from an associated web site or the full text. RSS makes it possible for people to keep up with web sites in an automated manner that can be piped into special programs or filtered displays.

A couple of ideas for Syndication:

The screenshot shows the Blogger Help interface. At the top is the Blogger logo. Below it is a breadcrumb trail: [Google Help](#) > [Blogger Help](#) > [Multi-Media Blogging](#) > [Audio and Podcasts](#) > [Getting Started](#). The main heading is "How do I post audio/music to my blog?". Below this is a section titled "THE QUICK ANSWER" with three bullet points: "Choose whether to embed audio/music from a third-party site or to host your own (podcast).", "To podcast, choose a host to store your audio files, then enable 'Link Fields' in your **Settings** | **Formatting** tab.", and "Use the link field to enclose audio files in your posts." Below the quick answer is a paragraph: "If you'd like to put music or audio on your blog, there are many options available to you. First you'll have to decide whether you want to host your own audio files or merely embed them from an existing third-party site." This is followed by a section titled "Embedding music /audio from third-party sites" with a paragraph: "If you'd like to embed a playlist or functionality from a third-party music service such as Last.fm or Imeem, Blogger's layouts feature makes it easy." Finally, there is a numbered list of four steps: "1. Visit your Template | Page Elements tab.", "2. Create a new widget by clicking 'Add a Page Element.'", "3. Choose the 'HTML/Javascript' widget.", and "4. Enter the HTML code provided by your third-party music service into the content window and click 'Save Changes.'"

STEPS

1. Post to website or hosting service--Box.net, MoveDigital, DreamHost, and BlueHost.
2. Upload Mp3 file to source and copy hyperlink
3. Post

iTunes U

You can contact the Department of Technology and Distance Education who will create a place for you to post your content in iTunes U.

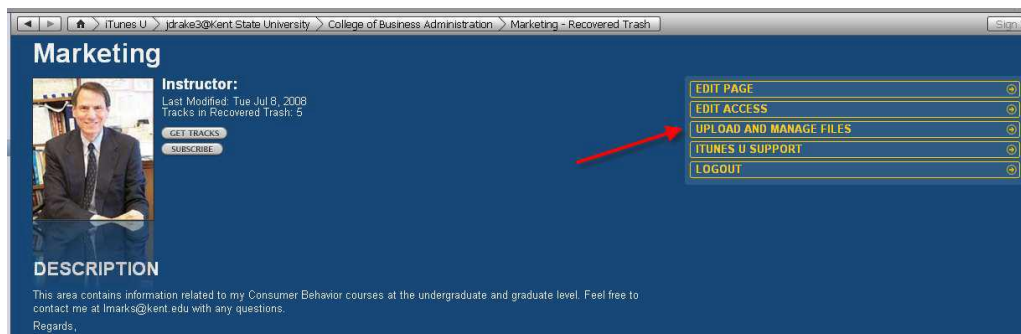

1. Log into <http://itunes.kent.edu/itunes/> using your Kent ID name and password. iTunes will open automatically. (You must have iTunes on your computer. Click onto your school.)

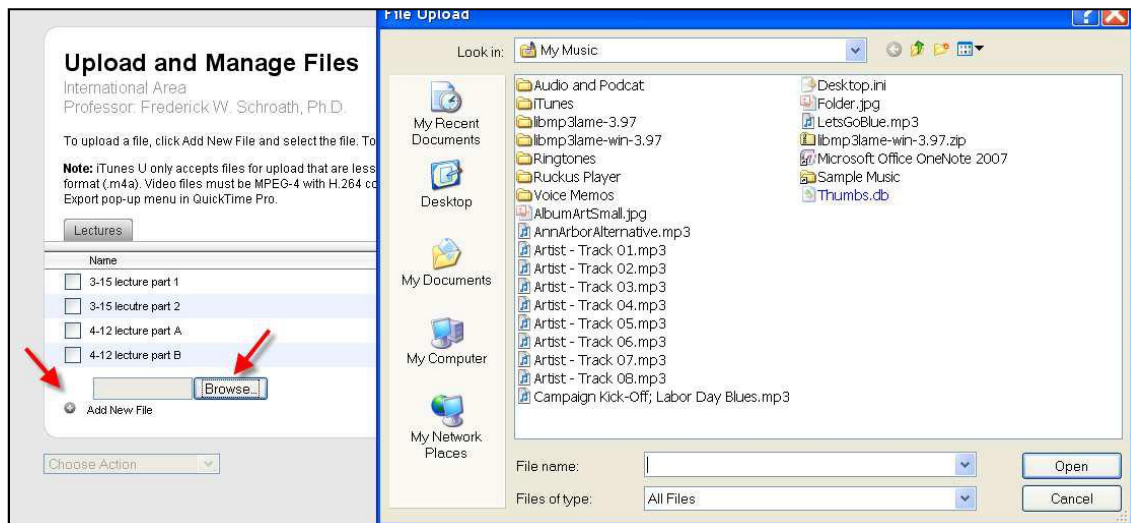

2. Click on the space created for you.

3. Click Upload

4. Click, Add new file. Browse for file on computer then select open. File will then upload iTunes.

Other “Feed” Resources

Feedburner www.feedburner.com

Hipcast <http://www.hipcast.com/>

Feed Validator <http://feedvalidator.org>

Odiogo <http://www.odiogo.com/>

feed2js <http://feed2js.org/> So what is "Feed to JavaScript"?

An RSS Feed is a dynamically generated summary (in XML format) of information or news published on other web sites- so when the published RSS changes, your web site will be automatically changed too.
