CURRICULUM DEVELOPMENT

Fall 2015

Public Health Program Planning, Implementation and Evaluation (Online MPH)

Developed the first online version of Public Health Program Planning, Implementation and Evaluation (53007) for the online MPH program. Course was based on the traditional format of the course, but required substantial additional work to comply with the standards and requirements of the online MPH program, including audio-recording and transcription of all lectures, creation of weekly discussion (e.g., forum) topics, weekly student assessments and a final group project. Course utilizes various online technologies and strategies to coordinate the group project.

Fall 2015

Emerging Issues (Dissertation Development Seminar for Doctoral Candidates)

Developed and delivered first-ever version of Emerging Issues in Health Policy & Management for doctoral students (72015). Course included discussion of current and emerging public health issues, but focused on developing the interests of each individual student into a coherent idea suitable for a doctoral dissertation. Course was designed for students to work collaboratively with the instructor and peers to work through and develop a research idea that could be the basis for a dissertation prospectus.

Fall 2013

Emerging Issues in Health Policy & Management

Because the previous version of Emerging Issues in Health Policy & Management had received consistently low satisfaction ratings from MPH students, the course was substantially revised and redeveloped (52015). New texts and other supplemental materials were selected and used for the course to provide students with a broad overview of various current and emerging public health issues. Students were challenged to select a current or emerging public health issue to research extensively and present to the class. Presentations included an overview of the public health issue, including challenges and recommendations to addressing the issue.

Summer 2012

Public Health Policy & Decision-Making (Online)

Developed the online version of Public Health Policy & Decision-Making for undergraduate students. Content from the traditional version of the course was updated and converted to an online format and included the creation of weekly quizzes and discussion (e.g., forum) topics.

Fall 2011

Grant-Writing in Social & Behavioral Sciences

Developed and delivered first-ever offering of Grant-Writing in Social & Behavioral Sciences for MPH students (52030). Course included an introduction to grant-writing and focused on three primary types of grant funding (e.g., service, research and foundation), discussion of similarities and differences of each grant type and included discussion of strategies for increasing probability of receiving grant awards. Students were required to write a grant selected from grants.gov and received constructive feedback on the grant application.

Fall 2011

Public Health Policy & Decision-Making

Revised and updated undergraduate course, Public Health Policy and Decision-Making (30033). Curriculum reviewed the US policy-making system and introduced students to the in-depth processes involved in developing and implementing public health policies, including barriers to enacting public health policy.

Summer 2011

Public Health Program Planning, Implementation and Evaluation

Developed and delivered first-ever offering of Public Health Program Planning, Implementation and Evaluation for MPH students (53007). Curriculum introduced students to planning, implementing and evaluation of public health programs, including needs assessment, data collection, and analysis and reporting, with an emphasis on addressing real-world issues for public health professionals.

Summer 2011

Upward Bound Program for Public Health

Developed and delivered 2-week educational program to Kent State University Upward Bound students. Course included a general introduction to the field of public health, basic information on conducting literature reviews and creating public health messages. Students worked in groups to select a public health issue, research the issue and create a public health service announcement (PHSA) about the issue. Students completed the 2-week program by presenting their topic to an audience and screening their PHSA.
